## PROFILE

---

Software Developer (Goldman Sachs Summer Analyst) focused on automation and LLM systems. Engineered an event-triggered pipeline that cut a 20-minute interactive variance workflow to a single reviewed pass; built full-stack platforms in Node.js, TypeScript, and PostgreSQL, reducing API latency by approximately 70%.

## EXPERIENCE

---

### Goldman Sachs

May 2026 – Jul 2026

*Summer Analyst Intern*

*Bengaluru, Karnataka*

- **Event-Triggered Automation:** Engineered an event-triggered automation pipeline in Python that replaced a manual daily variance narrative workflow (20 min/workflow) with a single human-reviewed pass.
- **Data Pipeline:** Built a deterministic data-preparation pipeline handling line-item grouping/mapping, materiality thresholds, and commentary joins, ensuring the LLM owned only prose while code guaranteed numeric integrity.
- **LLM Gateway Integration:** Designed a detailed generation prompt integrated with the firm's internal LLM gateway, enforcing guardrails via structural validation and a bounded retry loop.
- **Evaluation Harness:** Built a replay-based evaluation harness using LLM-as-judge scoring across three metrics (Completeness, Faithfulness, Correctness) to enable automated regression detection on prompt/model changes.
- **Real-Time Status Updates:** Implemented Server-Sent Events-based push notifications to sync narrative-generation status (in-flight/generated/failed) across concurrent reviewer sessions without polling.

## PROJECTS

---

### Trimium | Link Management and Analytics Platform

Dec 2025 – Jan 2026

*Next.js, Express, MongoDB, Redis, TypeScript, AWS*

GitHub Repository

- **Smart URL Management:** Developed custom alias creation, bulk shortening of up to 500 URLs per batch, password protection, scheduled link activation with countdown timers, and an all-in-one personal link-in-bio hub with customizable themes.
- **Advanced Analytics and Visualization:** Built tracking across 7+ analytics dimensions including clicks, unique visitors, geographic distribution, browser/OS statistics, and referrer sources, with CSV export.
- **Team Collaboration:** Architected a multi-workspace system featuring Role-Based Access Control (Admin/Member/Viewer), shared analytics, and tag-based organization.
- **Session-Based Authentication:** Integrated email-verified registration, password resets, profile management, and session monitoring with remote logout functionality.
- **Security:** Developed a hybrid rate-limiting system that triggers stateless Proof-of-Work (PoW) challenges upon IP-limit exhaustion; eliminated false positives for shared-IP organizations while maintaining 100% API availability for legitimate users.
- **API Performance Optimization:** Reduced API response times by approximately 70% by optimizing MongoDB queries, implementing strategic compound indexing, Redis caching layers, and BullMQ background workers.
- **CI/CD Infrastructure:** Engineered a GitHub Actions pipeline with path-based change detection to selectively deploy client and server on changes, featuring zero-downtime PM2 reloads and auto-rollback on failed health checks.

### Talkasauras | AI Powered Telegram Bot

Jan 2026 – Feb 2026

*Telegraf, PostgreSQL, Ollama, Hugging Face, Docker*

GitHub Repository

- **AI-Powered Telegram Bot:** Developed a personalized Telegram bot leveraging Ollama for context-aware AI responses with customizable user instructions and adjustable writing styles, enabling natural language interactions tailored to individual preferences.
- **Containerized Deployment:** Architected and deployed the application using Docker, orchestrating 5 interconnected containers to ensure consistent, reproducible deployment workflows.
- **Intelligent Reminder System:** Engineered an NLP-based reminder scheduler using Chrono-node for natural language parsing and BullMQ for reliable background job processing and queue management.
- **Dual-Mode Chat Sessions:** Implemented flexible chat session handling with both persistent and ephemeral modes, incorporating AES-256 encryption at rest for secure database storage of user conversations.
- **Admin Dashboard Bot:** Built an internal administrative bot interface for real-time system monitoring, analytics and bulk message broadcasting capabilities.

- **Real-Time Collaborative Coding:** Engineered a multi-user coding platform with Socket.IO enabling simultaneous code editing across 10+ programming languages.
- **Intuitive Code Editor Interface:** Developed a modern editor with syntax highlighting, multi-file project support, and streamlined navigation for enhanced developer experience.
- **Secure Authentication System:** Implemented JWT-based authentication with comprehensive security features including email verification and password reset functionality.

## EDUCATION

---

**Dhirubhai Ambani University**

Gandhinagar, Gujarat

*Information and Communication Technology; CPI: 8.59*

*Aug 2023 – Present*

- **Coursework:** Object-Oriented Programming, Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks

**Prime Science School**

Jamnagar, Gujarat

*Higher Secondary Education; Score: 82.15%*

*June 2021 – June 2023*

## TECHNICAL SKILLS

---

**Backend:** Node.js, Express.js, REST APIs, Socket.IO, BullMQ

**Languages:** TypeScript, JavaScript, C, C++, SQL

**Databases and ORM:** PostgreSQL, MongoDB, Redis, Prisma, Mongoose

**Frontend:** Next.js, React.js, Tailwind CSS, Shadcn UI, HTML, CSS

**Cloud/Deployment:** AWS (EC2, S3), Vercel, Render, CI/CD

**Tools:** Git, GitHub, Postman, Docker, Nginx, PM2, Linux, Ollama

## ACHIEVEMENTS

---

- Won 1st Prize in Winter of Code 7.0 (MSTC DAU) among 65+ participants.
- Solved 1700+ problems on LeetCode (MysteriousMortal) with a peak rating of 1819.
- Ranked 314 globally in CodeChef (devtrivedi03) Starters 169D.
- Ranked 1309 in LeetCode Biweekly Contest 154 among 27K+ participants.
- Ranked 427 in ICPC 2025 Amritapuri Regional (Preliminary Round).
